

The logo features three overlapping green circles on the left. The first circle contains a white number '1', the second contains a white plus sign '+', and the third contains a white number '1'. To the right of these circles, the word 'CHALLENGE' is written in a bold, black, sans-serif font.

1+1 CHALLENGE

END GAME of Humanity

The Unmitigated Failure of Everything

It's time to face the facts. The current climate crisis is a clear testament to the utter failure of past environmental policies. The Earth will consequentially change in the next 10 years, posing significant risks to humanity. What kind of world do you want to live in 10 years?

**Scars of the Earth,
relentlessly scorched by us.**

The future ahead of us is **stark and ominous**

When you require a
conclusive solution

We have found **!** A RESOLUTION

The primary cause
of environmental pollution

1.5 billion cars

responsible for **20%** of all greenhouse gases*

*Energy Technology Perspectives 2020 IEA (2020)

We have a Tool **O₂BAND**

Provided free
for the planet and our future.

EXPECTED EFFECT

of O2 BAND

Exhaust Reduction

Reduces exhaust gas by 30-65%.

Noise Reduction

Reduces engine noise and vibration.

Increased Power

Provides higher power output than before.

Comfortable Drive

Ensures comfortable driving when the accelerator pedal is pressed.

HOW TO DO?

We achieve carbon neutrality

Distribute O2 bands to 1.5 billion people
through the 1+1 challenge.

WHY DO?

Why we are doing the 1+1 Challenge

For 18 years, we have been conducting

We were established in 2005 with the conviction and will of its founder to create an eco-friendly impact through business.

In 2006, the company created the EcoFresh brand and launched the first deodorant made of natural material zeolite in Korea.

Since then, the company has established a manufacturing plant and launched around 100 eco-friendly household items, continuously practicing business for the planet.

We have tried many eco-friendly products and services, with some achievements and limitations.

In 2023, the Earth is warning us. Climate experts predict that we will reach a tipping point of an irreversible climate crisis in the next 10 years.

We had to do whatever we could in this reality.

and we found a new hope in O2 BAND, a synthetic material developed in our laboratory.

It was found that the energy emitted reacts to the power engine.

This effect ultimately increases the combustion efficiency of the vehicle engine and reduces exhaust gas emissions.

We thought about how to make the maximum **eco-friendly impact** with this product, and that's how the 1+1 challenge started.

O2 bands are provided free for the planet and our future.

To create an eco-friendly impact, we decided to receive 'action' rather than sales.

WE NEED TO SUPPORT

We wholeheartedly welcome any assistance in addressing the climate crisis.

any way you can
